A logistic function or logistic curve is a common "S" shape (sigmoid curve), with equation:

$$f(x) = \frac{L}{1 + e^{-k(x-x_0)}}$$

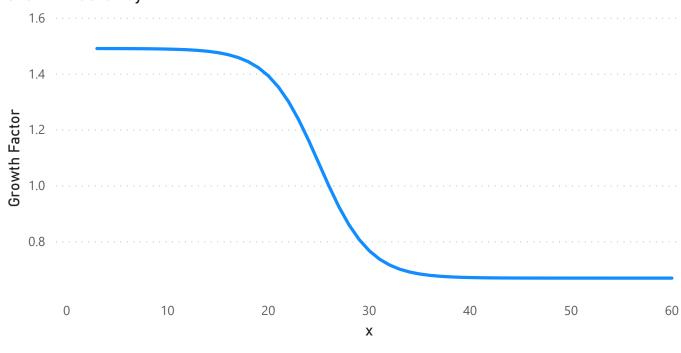

where

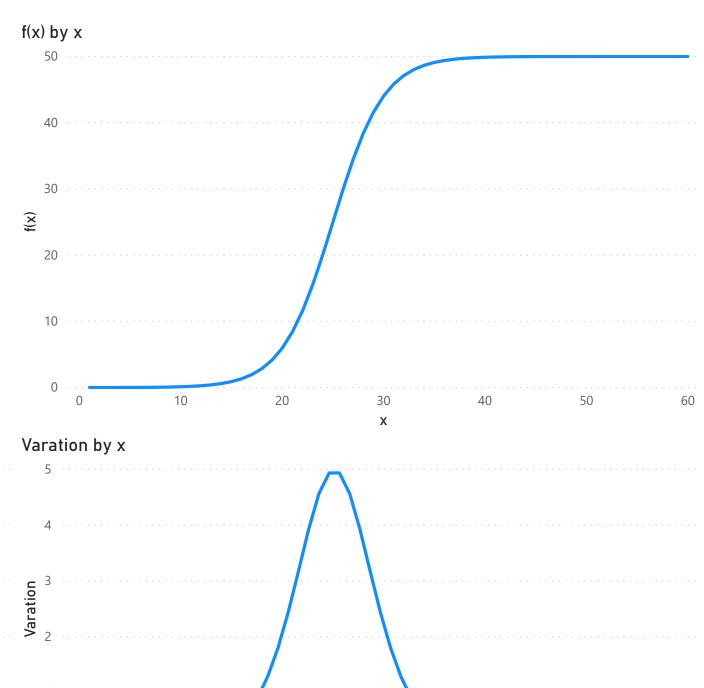

- e = the natural logarithm base (also known as Euler's number),
- $x_0$  = the x-value of the sigmoid's midpoint,
- ullet L = the curve's maximum value, and
- k = the logistic growth rate or steepness of the curve.<sup>[1]</sup>

More information on wikipedia

In this example we are using: L=50, k=0.4, x0=25

Deceased, Discharged Healed, Home Isolation, Hospitalized with Symptoms, Intensive Care and New Positive by Date

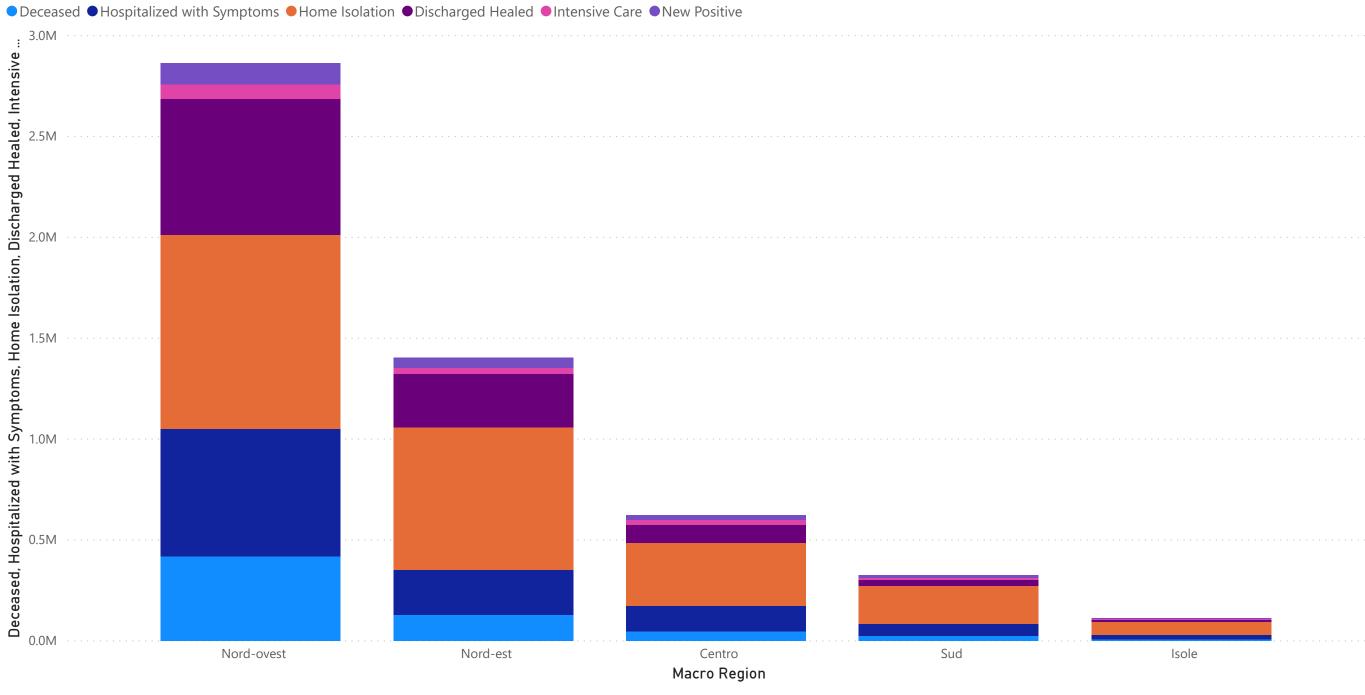

## Total Cases, Total Hospitalized, Tested and Total Positive by Date

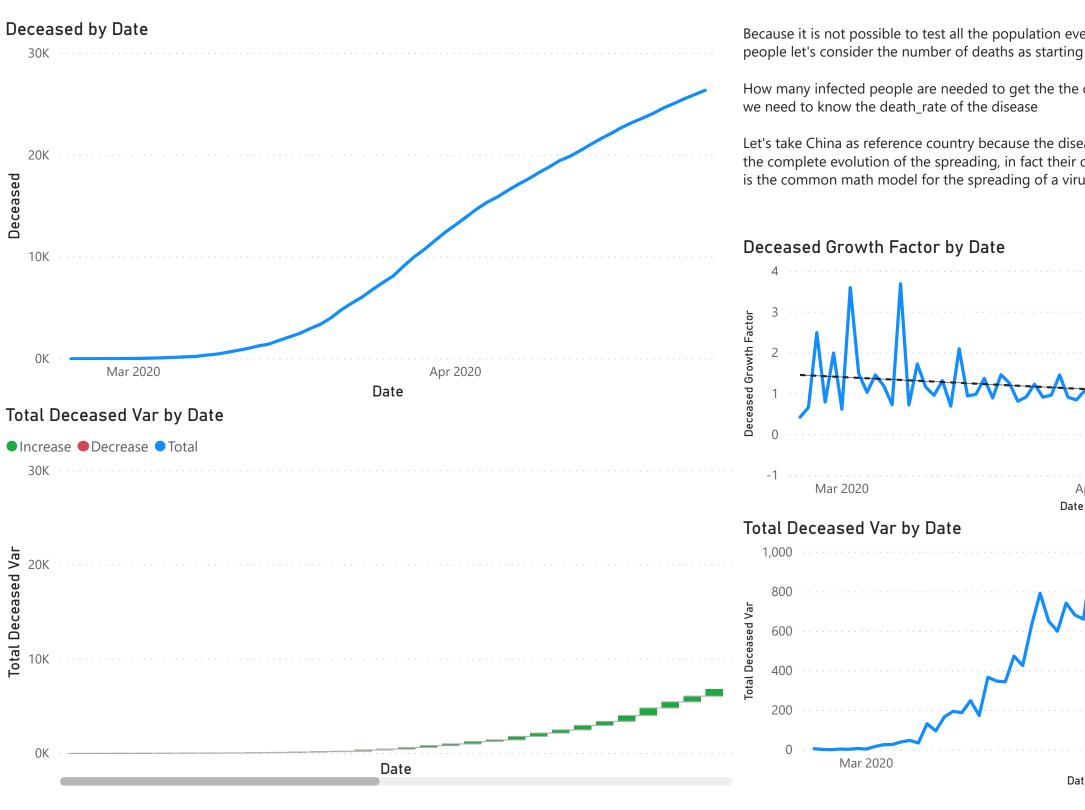

● Total Cases ● Total Hospitalized ● Tested ● Total Positive

## Deceased, Hospitalized with Symptoms, Home Isolation, Discharged Healed, Intensive Care and New Positive by Macro Region

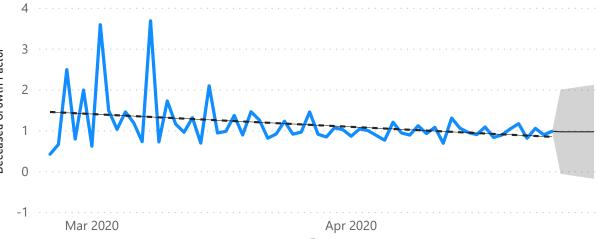

The virus started spreading in North Italia especially in Lombardia

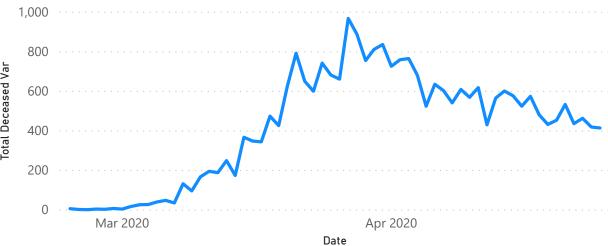

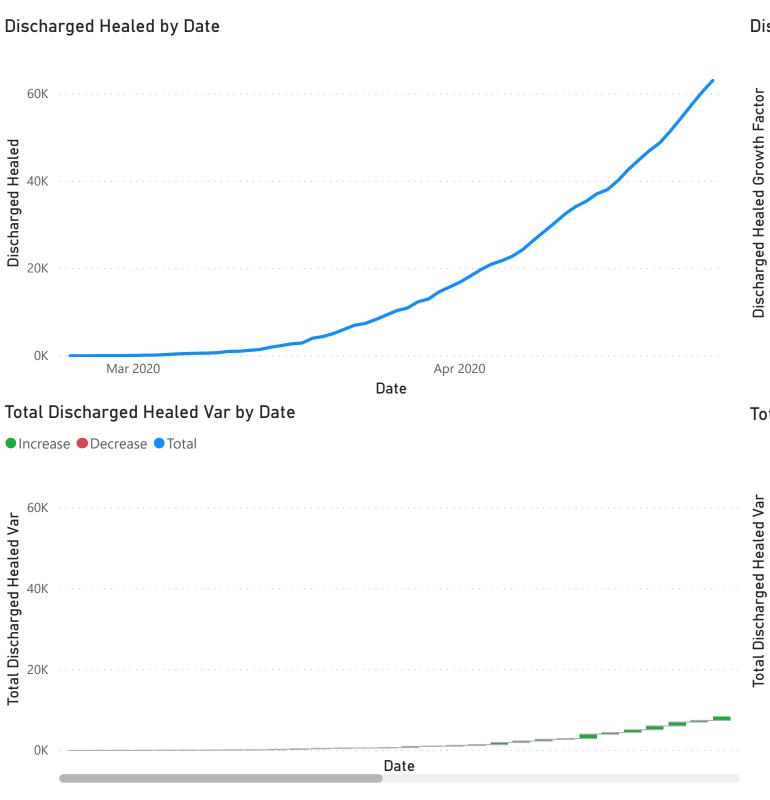

Because it is not possible to test all the population everyday to get the real number of infected people let's consider the number of deaths as starting point for our analysis

How many infected people are needed to get the the deaths we see? Of course to compute this

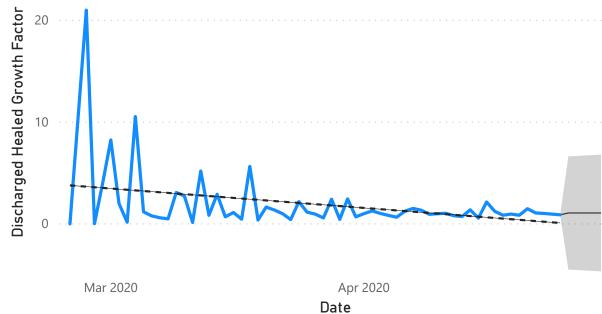

Let's take China as reference country because the disease started there and we can a have a look at the complete evolution of the spreading, in fact their data match pretty well a logistic curve which is the common math model for the spreading of a virus

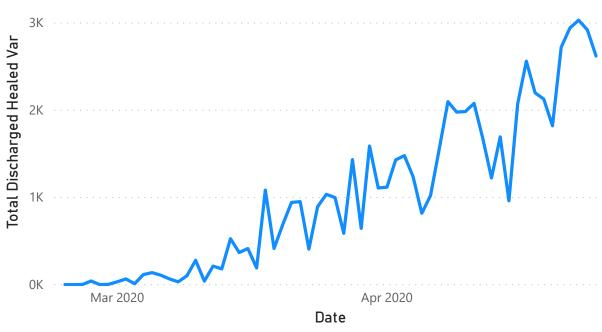

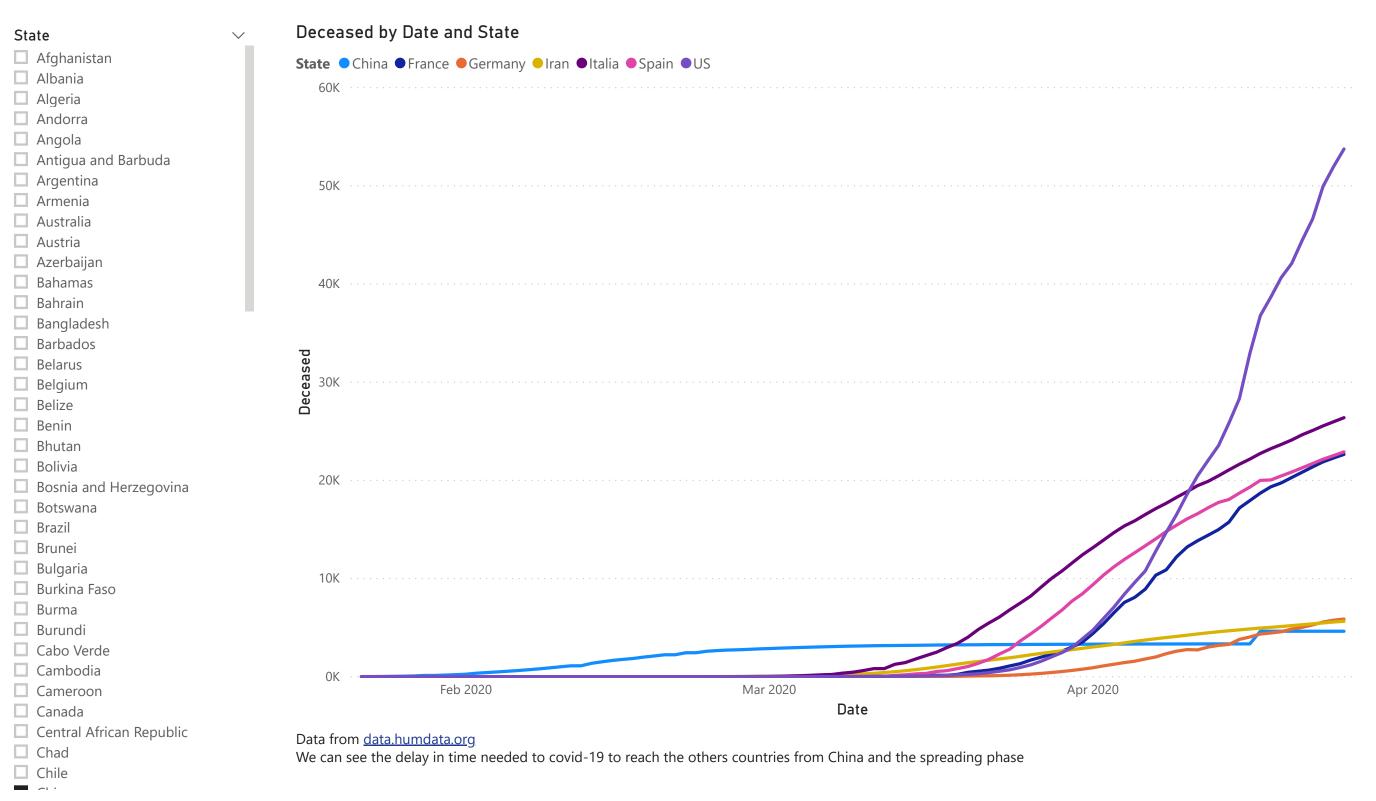

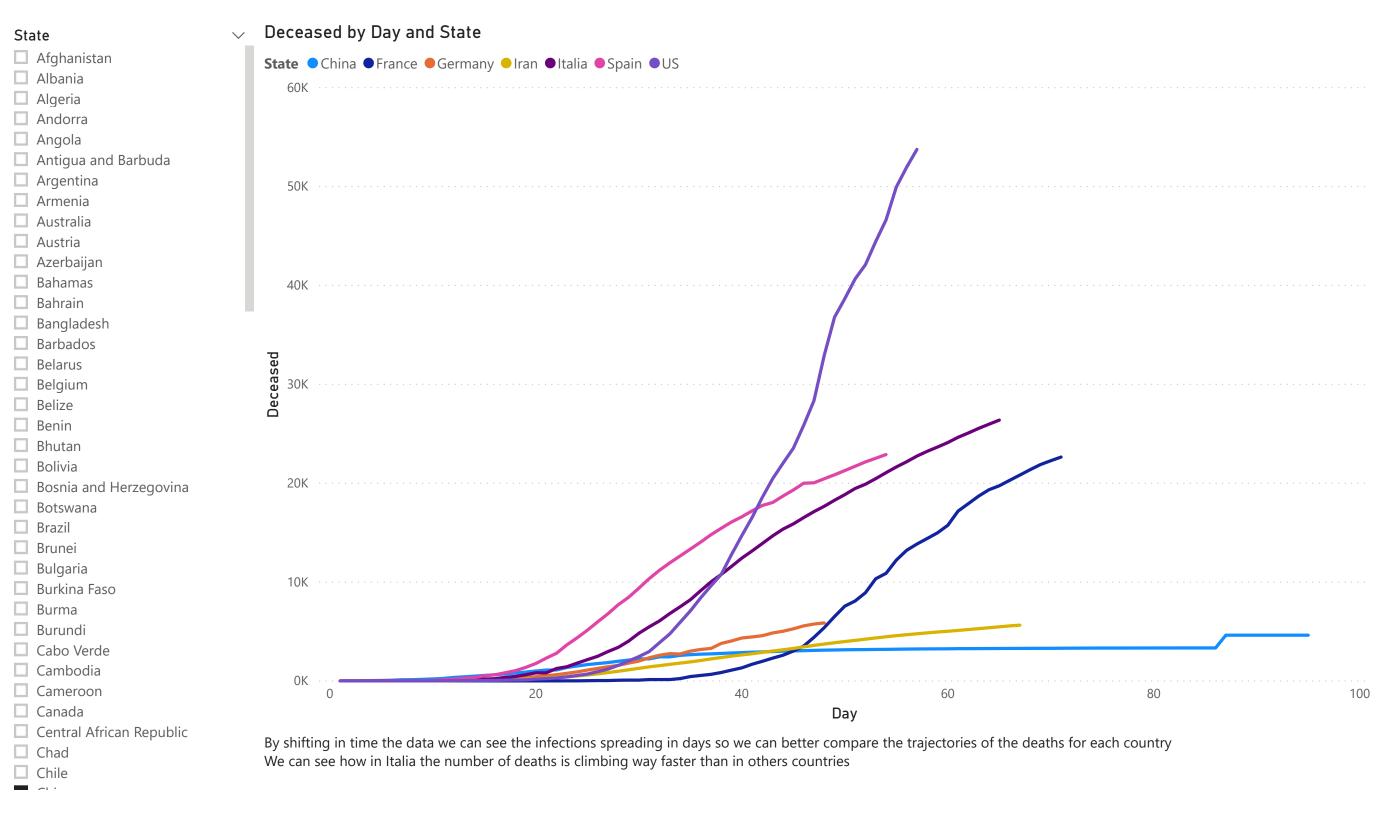

## Discharged Healed Growth Factor by Date

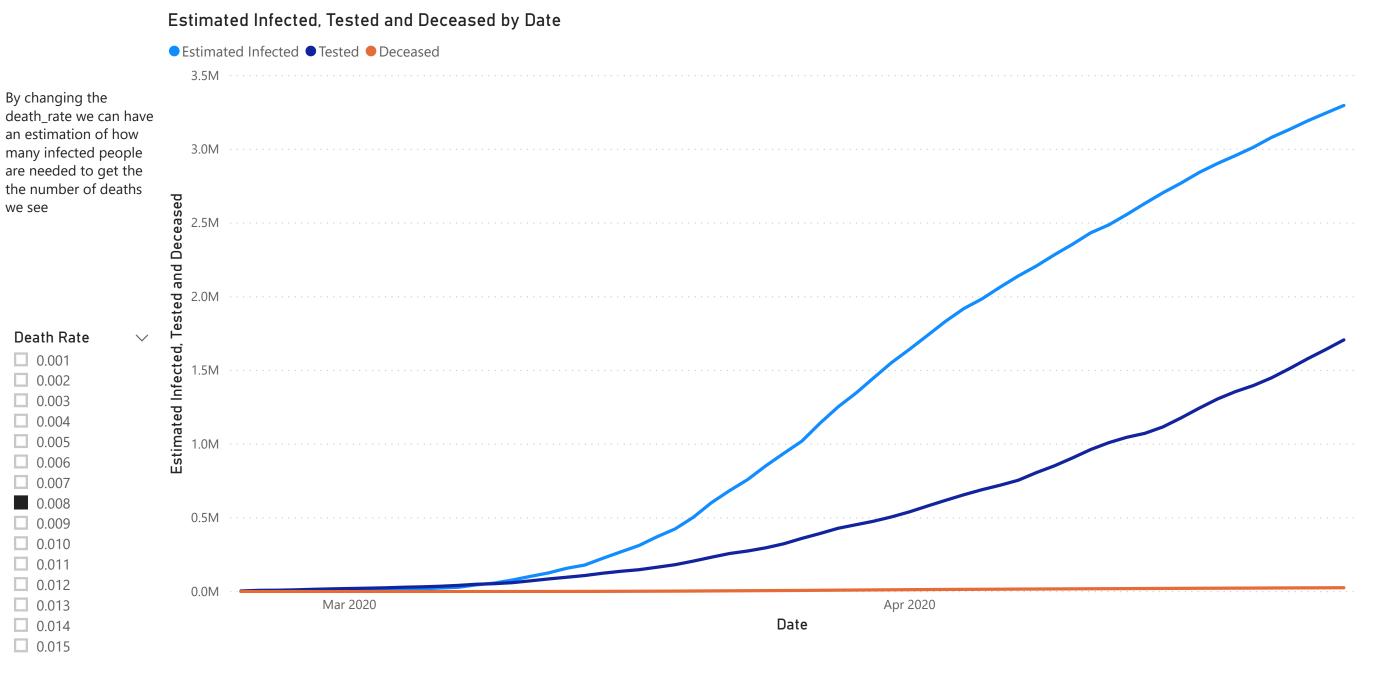

Total Discharged Healed Var by Date

Death rate in Italia is way higher than in China. This can be caused by a lot of <u>factors</u>: overall age of people, Italy counts every deaths in which covid19 is involved as a death by covid19 even if previous disease were present in the patient (99% of death in Italia happen to people having others diseases. More info about this <u>here</u>)

More information on <u>wikipedia</u>: "As of 20 March 2020, the <u>rate of deaths per number of diagnosed cases</u> is 4.1%; however, it ranges from 0.2% to 15% according to age group and other health problems"
